

Saunafin Wood Stove Installation

There is no classification for wood-burning sauna heaters. So a wood stove can not be approved. Saunafin recommends following the Federal Government guideline for "Uncertified Wood Stoves"

In brief, the rule is:

Non-combustible wall surface = 0 clearance

Combustible wall surface = 36" clearance

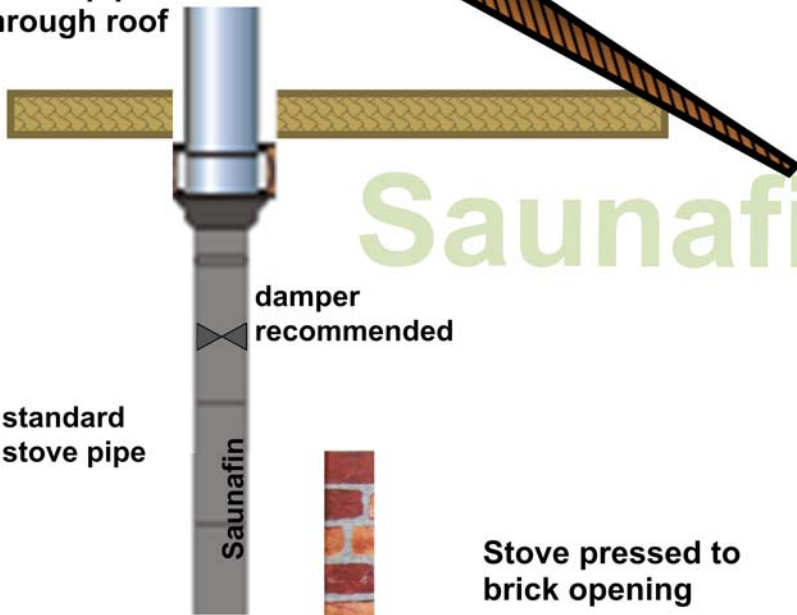

Combustible wall with shielding = 12" clearance

Stove pipe clearance to combustible wall = 18"

Please consult Uncertified Wood Stove guideline for full installation details

Insulated stove pipe through roof

standard stove pipe

Stove pressed to brick opening

Metal shielding to reduce clearance at combustible surface
