## Selecting your Pre-Fab Sauna Heater (& Wiring Considerations)

In general, heaters with built-in controls are simpler to install in pre-fab saunas. This is because the supply wire goes directly to the heater. You do not have to route the wire to a separate control. As a result, the Saaku Sauna CP and Tylo Sense Sport are the obvious choices.

Having said that, you are not limited to a built-in control models.

Some prefer separate controls for the convenience or for the features that are only available with certain models

The Tylo Plus and Tylo Combi are available with the Pure or Elite (wi-fi) control

The "steaming" Tylo Combi only comes with a separate control

When opting for a separate control model with a pre-fab sauna, the control is usually installed inside the sauna. We include extra trim to conceal the wire.

**NOTE:** When installing a Tylo control inside sauna, the control must be at least 12" away from the heater and no more than 36" above the floor.

All of our outdoor pre-fab saunas are also available with wood burning saunas heater.

The outside feed wood stove is manufactured specially for our saunas.

You may also select the inside feed Harvia M3 with glass door to view the fire
